

PHPS_312

Magnified Imaging II

Assignment

Video at the microscope

Objective: To gain experience in sample management and microscopy techniques used for making video clips. Various aquatic invertebrates or crystal preparations make excellent subjects for this assignment

Submission: Produce a short video including clips that demonstrate your skills at a microscope. Length/time of work is up to your investigations but must reflect “good clean” video footage. This would include tracking, focus, sample prep, etc. Multiple microscope techniques can be explored.
